URBANIZATION IN INDIA

(GROUP A)

WHAT IS URBANIZATION

Urbanization is a social transformation in which population in urban areas increases overtime, mainly through reclassification of geographical areas into urban or rural areas or through rural urban migration.

Definition of Urban areas across some countries:

1. Argentina: Populated centers with 2000 or more inhabitants.

2. Canada: Incorporated cities, towns and villages of 1000 or more inhabitants with urbanized fringe; Unincorporated places of 1000 or more inhabitants with population density of at least 390 persons /sq.km with urbanized fringe.

3. China: (a) Location of country-level govt. agency (b) population of less than 20000 with non-agricultural economic activity exceeds 2000 (c) population of more than 20000 with non-agricultural economic activity exceeds 10%

4. United Sates: Places of 2500 or more inhabitants and urbanized.

Definition of urbanization by Government Of India (National census office) is:

1. *All places with a municipality, corporation, cantonment board or notified town area committee, etc.*
2. *All other places which satisfied the following criteria:*
   i) A minimum population of 5,000;
   ii) At least 75 per cent of the male main working population engaged in non-agricultural pursuits; and
   iii) A density of population of at least 400 persons per sq. km.

The first category of urban units is known as Statutory Towns. These towns are notified under law by the concerned State/UT Government and have local bodies like municipal corporations, municipalities, municipal committees, etc., irrespective of their demographic characteristics as reckoned on 31st December 2009. Examples: Vadodara (M Corp.), Shimla (M Corp.) etc. The second category of Towns (as in item 2 above) is known as Census Town

CAUSES OF URBANIZATION IN INDIA

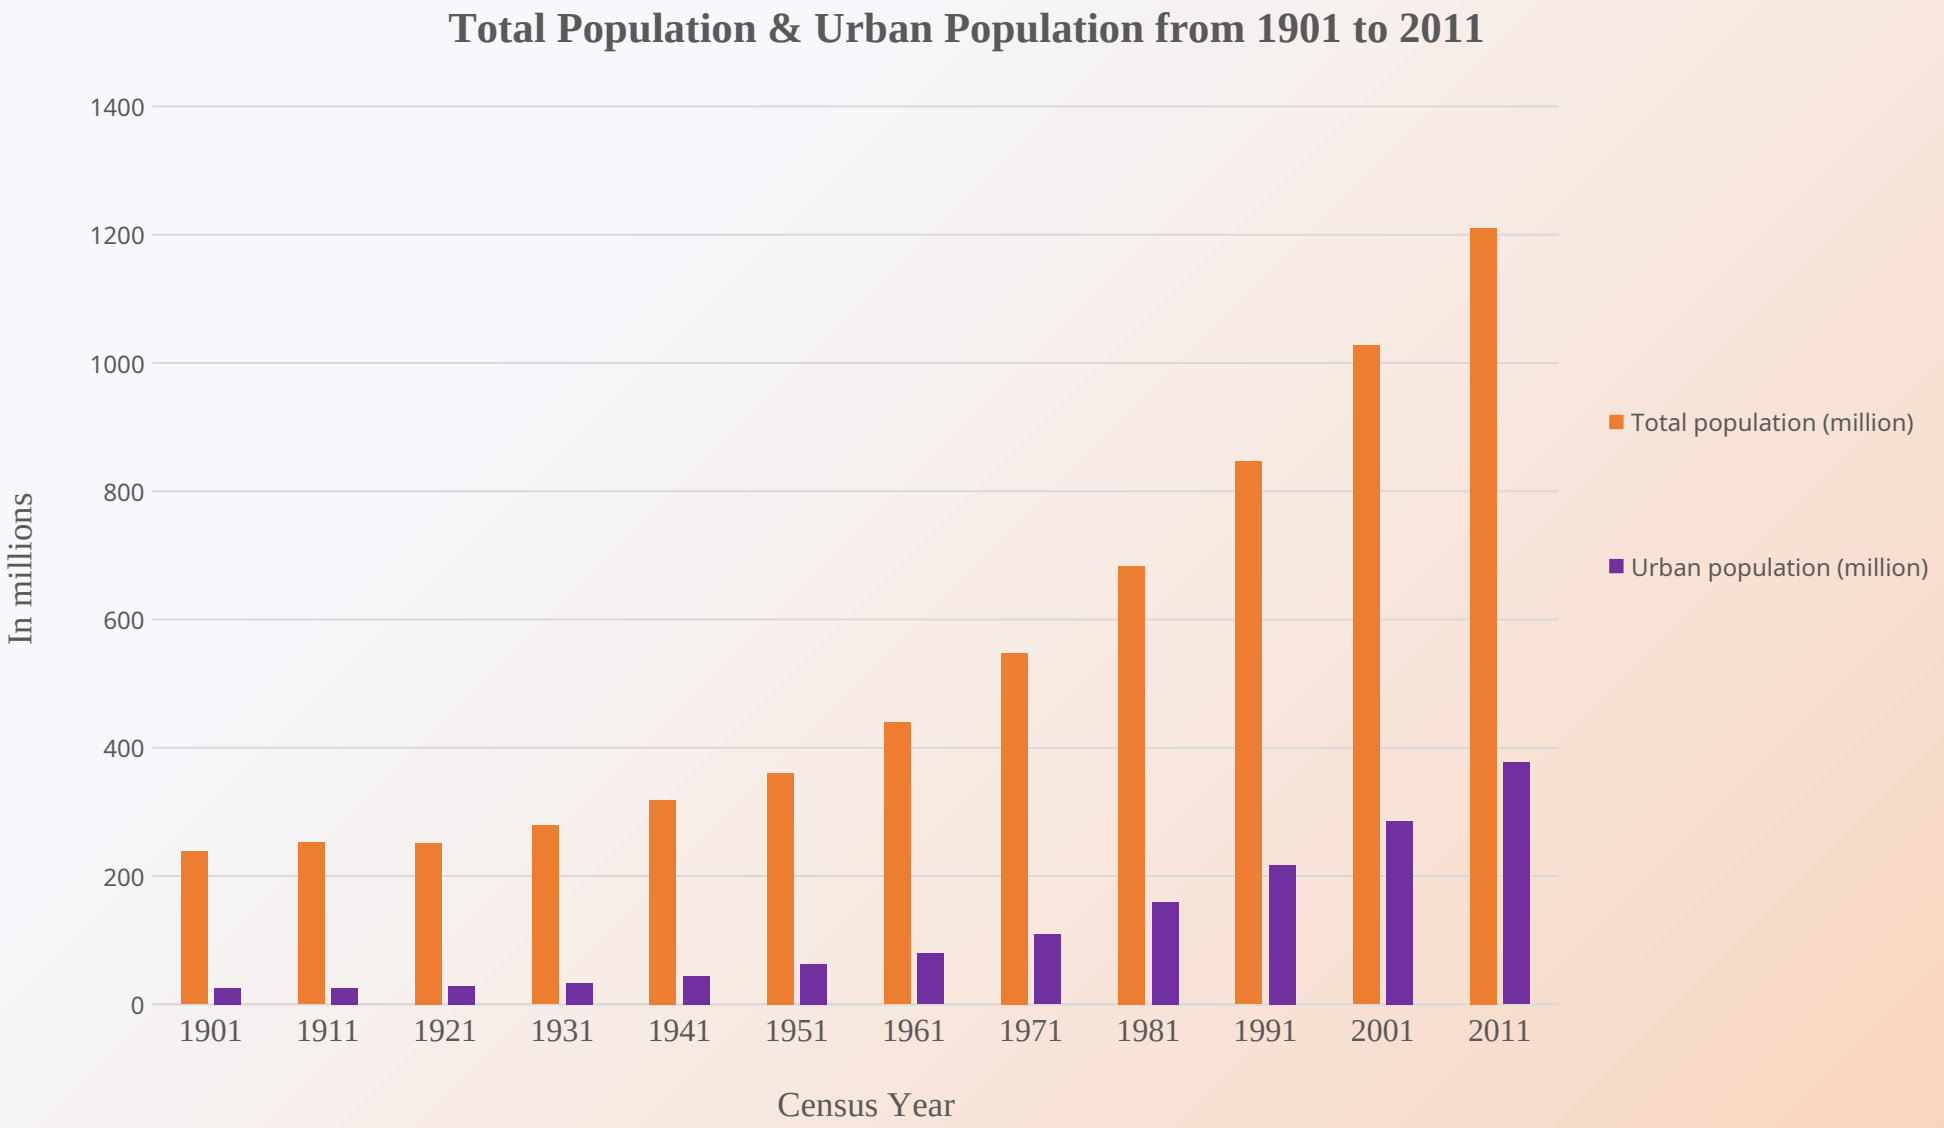

Causes of Urbanization in India:

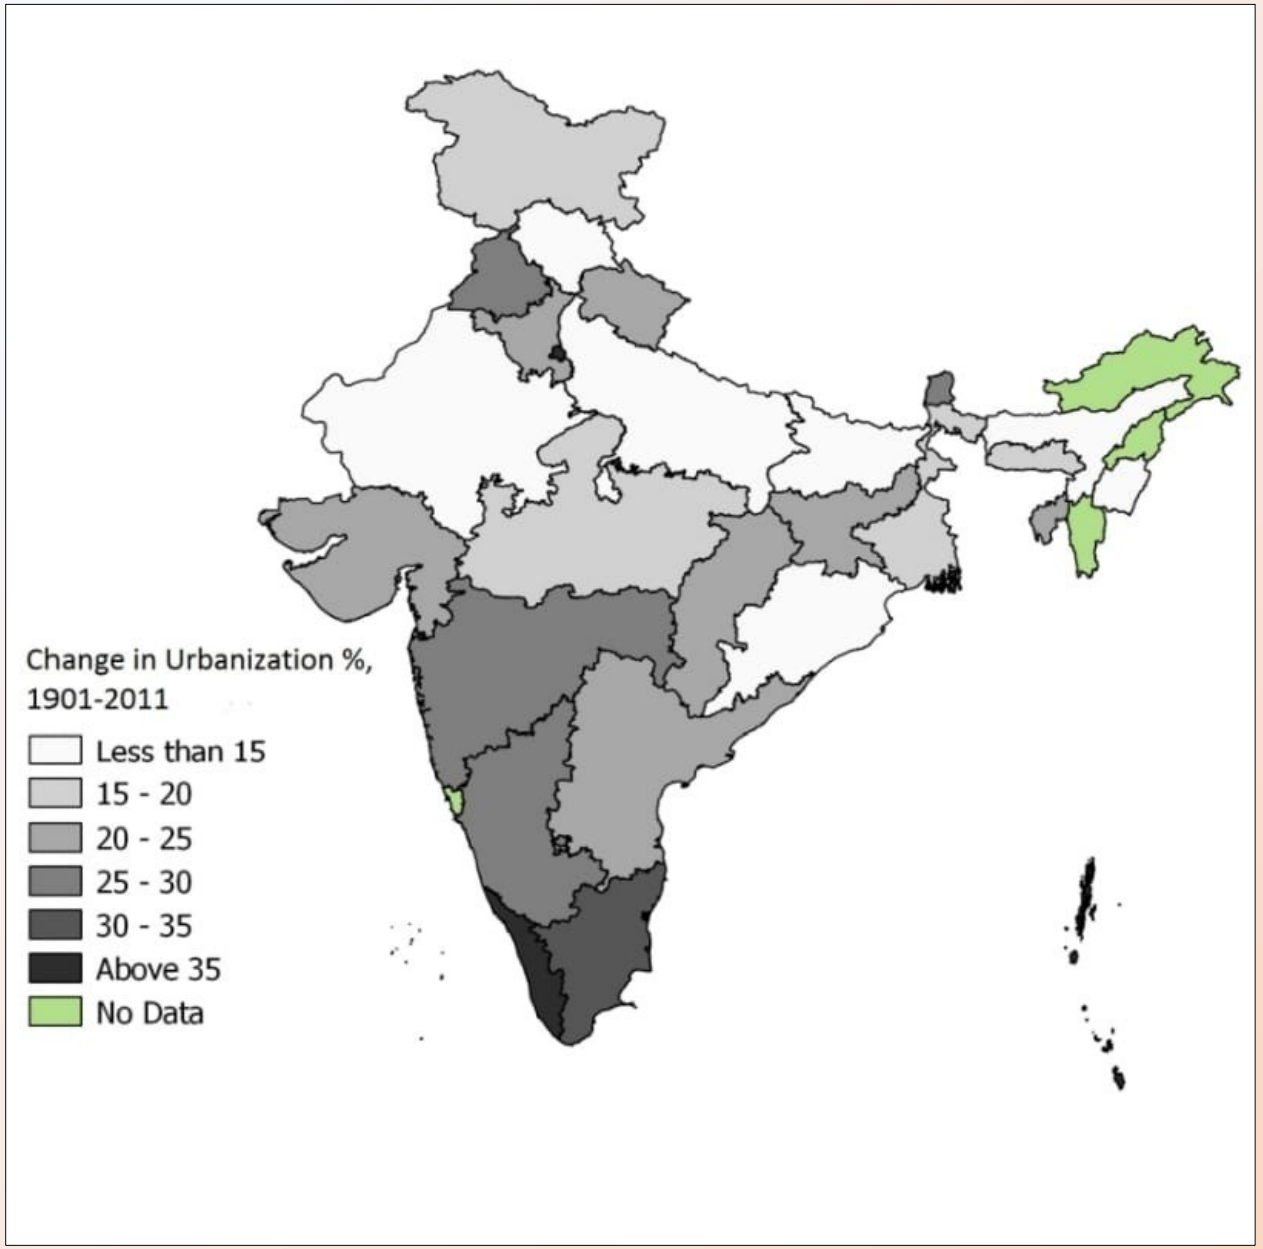

1. Demographic transition : under which, mortality decline is a major process for urbanisation.
2. Urban natural increase.
3. Rural to urban migration.
4. Social benefits and services.
5. Rural urban transformation.

POSITIVE IMPACT OF URBANIZATION

Urbanization in India has a specific positive impact on the development of a nation by improving the quality of living for the people. Some effects are :

1. Urbanization leads to creation of more employment opportunities.

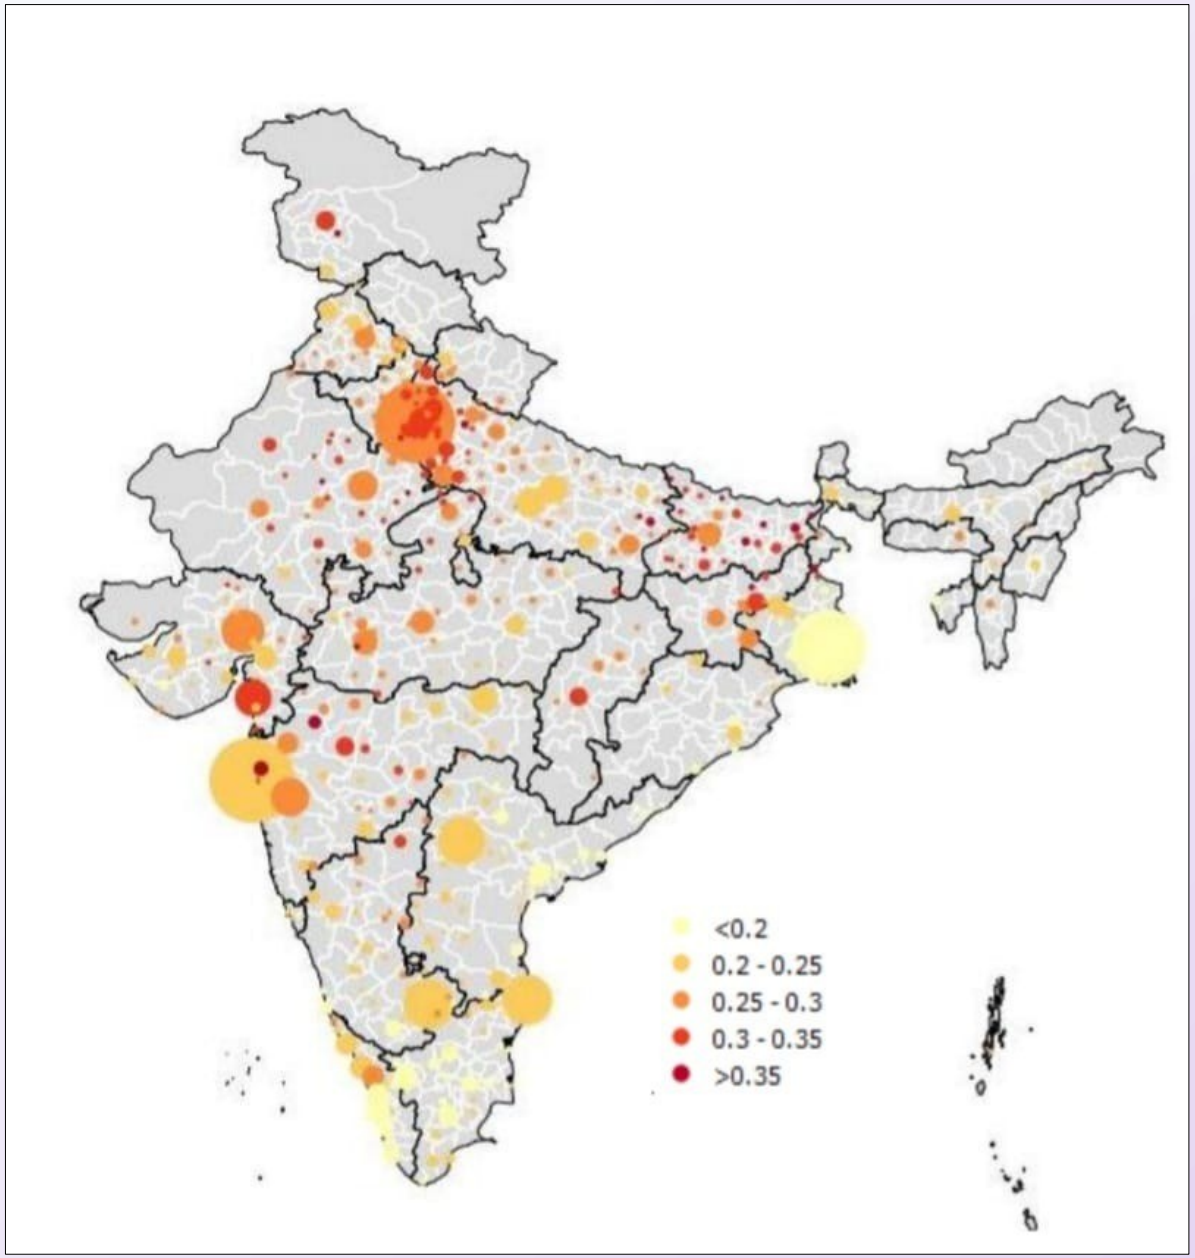

2. Urbanization causes improvement in infrastructural facilities. Urban areas offer much scope for an efficient living. It improves the availability of basic amenities.

3. Access to education, health, social services and cultural activities is more available to people here. Urbanization has played a significant role in lowering illiteracy rates and infant mortality rates.

4. The density of urban populations makes it easier and less costly for the government to provide essential goods and services like potable water and electricity.

5. Urbanization has led to a significant rise in communication and logistics with better transportation facilities.

6. Urbanization plays a major role in improving rural lives. People who temporarily migrate to cities acquire better skills and knowledge which they may use for the development of their own villages.

NEGATIVE IMPACT OF URBANIZATION

Negative Impacts:

1. Over population – Concentration of population is a major problem in cities.

Reasons:

- Accommodation problem
- Growth in slums
- Homelessness

2. Opportunities gradually decreases:

- Competition rises which tends to unemployment
- Crime rates increases.
- Unconventional means of earning like gambling, beggary etc. increases

Source: (For Graph) Gap Minder Data

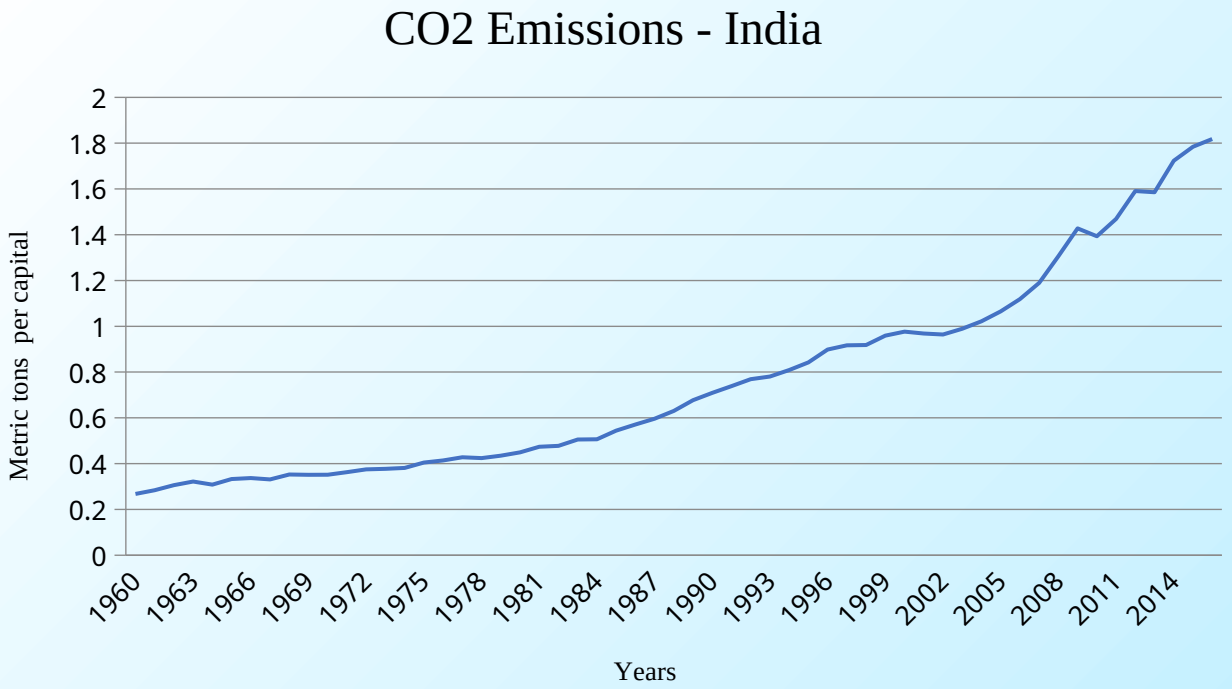

3. Increase in the level of pollution

- Scarcity of drinking water
- Unhygienic conditions of living
- Air quality decreases
- Level of traffic increases which leas to noise pollution
- Improper disposal of garbage and sewage
- Increase in chronic illness

4. Psychological Impact

- Affects overall national inequality
- Communal riots increases
- There’s a tend towards terrorism
- Tension and stress persists.

Cities facing these problems mostly -Delhi, Chennai, Mumbai, Kolkata

REMEDIAL MEASURES TAKEN BY GOVERMENT

As we see there are many problems of urbanization. We need to address this inefficiencies and prescribe policies to curb against the adverse effects of urbanization.

We can take some remedial measures to address this issue:

1. Provision of Urban Amenities to Rural areas (PURA): we may try giving rural people modern facilities.

2. Building Sustainable and Environmentally-friendly Cities: the objective here is to build sustainable cities that embrace improved environmental conditions and safe habitats for all urban populations.

3. Creation of More Jobs : creating more jobs will decrease unemployment.

4. Provision of Essential Services: The objective here is to provide and implement employment opportunities and wealth creation activities so that people can earn a living to pay for the maintenance of the services.

5. Population Control: Key stakeholders in urban areas must provide campaigns and counseling for effective medical health clinics and family planning to help reduce the high rates of population growth.

GOVERNMENT MEASURES TO INCREASE URBANIZATION

Major Urban Development Schemes taken by Indian Government so far

- **The Constitution Act (1993) :** This act emphasized on strengthening urban planning , regulation of land use , roads and bridges.

- **National Urban Transport Policy(2006)** : The aim of the policy is to provide affordable, reliable, and sustainable urban transport system for the growing number of city residents.

- **National Urban Renewal Mission (NURM):** The primary objective of this plan is to create economically productive and efficient cities.

  The plan has two submissions :

  1. Urban Infrastructure and Governance(UIG)
  2. Basic services for urban poor(BSUP)

- **Smart city** : the concept of smart city was introduced in the National budget of 2014. The plan aims to achieve the following in every smart cities
- e- governance
- sustainable development
- people centric technological application
- smart PDS rationing

- **Solid Waste Management in OKHLA :** Waste management is a major concern for any densely populated urban areas. Thus dealing with it in a efficient and environment friendly way is a necessity for every urban city.

  Tiramur OKHLA Municipal Solid Waste Management is the first commercial waste to energy facility in India that aims to convert one third of the Delhi garbage into electricity enough to serve 6 lakh households.

- **Swach Bharat :** The Swach Bharat mission launched on 2nd October 2014 aims at making urban India free from open defecation an achieve a 100% scientific management of municipal waste in 4041 statutory towns in the country.

Conclusion

- In conclusion, we can see that urbanization is brought about by a certain demographic sequence.
- It is seen that *BIMARU* States were worst when it came to changes in urbanization
- Although the positive effects of urbanization can range from more employment opportunities to better access to services like education, health etc.
- The negative effects can be as drastic as increased pollution and increased crime rates
- So Government policies play a major role in curbing the negative effects and to maximize the benefits of this process.
